## DETAILED ACTION

### *Election/Restrictions*

Applicant's election of group I in the reply filed on 7/20/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 4-14 and 21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 7/20/05.

### *Claim Rejections - 35 USC § 101*

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-3 and 15-20 are rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a specific asserted utility or a well established utility.

The examiner fails how it is possible to couple at least one atom and at least one hour-glass mode and converting quantum electrodynamic vacuum cavity fluctuations electromagnetic radiation energy to electrical and to a superconductive vortex implosion propulsion energy. Currently, zero point energy is just theoretical and there are currently no substantive way of harnessing the energy. The applicant claimed to have somehow harness the energy from the vacuum of space with an antenna, spark gap emitter, hyperbolic dish, etc. seems to lack creditable evidence or data to show that this is possible. The applicant is invited to show a working model and peer reviewed experimental data that shows that this works as claimed and

disclosed. Furthermore, to utilize this claimed invention and applying it to cars and aircrafts without showing how it is connected to those vehicles seems to show that there is no well established utility.

Claims 1-3 and 15-20 are also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

### ***Claim Rejections - 35 USC § 103***

Claims 1-3 and 15-20, as best understood, are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Clapp or Floral.

Clapp or Floral disclose energy manipulation means that uses a dish.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Toulemonde and Eddy disclose electrical energy converter.

Blais et al, Yoshie et al, Kimble et al, Yu. Maklin et al disclose quantum electrodynamic.
